(Marks are shown in brackets.)

2
$$f(x) = e^{2x-1}, x \ge 0$$

The curve C with equation y = f(x) meets the y-axis at P.

The tangent to C at P crosses the x-axis at Q.

The line y = 2 intersects C at the point R.

b Find the exact value of the
$$\alpha$$
-coordinate of R. (3)

3
$$f(x) = \frac{3x}{x+1} - \frac{x+7}{x^2-1}, x > 1$$

a Show that
$$f(x) = 3 - \frac{4}{x - 1}$$
, $x > 1$. (5)

$$\mathbf{b} \text{ Find } \mathbf{f}^{-1}(\mathbf{x}). \tag{4}$$

c Write down the domain of
$$f^{-1}(x)$$
. (1)

4 a Sketch, on the same set of axes, for x > 0, the graphs of

$$y = -1 + \ln 3x$$
 and $y = \frac{1}{x}$ (2)

The curves intersect at the point P whose x-coordinate is p.

Show that

b p satisfies the equation

$$p \ln 3p - p - 1 = 0 \tag{1}$$

$$\mathbf{c} \ 1$$

The iterative formula

$$x_{n+1} = \frac{1}{3}e^{\left(1 + \frac{1}{x_n}\right)}, \quad x_0 = 2$$

is used to find an approximation for p.

- **d** Write down the values of x_1 , x_2 , x_3 and x_4 giving your answers to 4 significant figures. (3)
- e Prove that p = 1.66 correct to 3 significant figures. (2)
- **5** The curve C_1 has equation

$$y = \cos 2x - 2\sin^2 x$$

The curve C_2 has equation

$$y = \sin 2x$$

a Show that the x-coordinates of the points of intersection of C_1 and C_2 satisfy the equation

$$2\cos 2x - \sin 2x = 1\tag{3}$$

- **b** Express $2\cos 2x \sin 2x$ in the form $R\cos(2x + \alpha)$, where R > 0 and $0 < \alpha < \frac{\pi}{2}$, giving the exact value of R and giving α in radians to 3 decimal places.
- **c** Find the x-coordinates of the points of intersection of C_1 and C_2 in the interval $0 \le x < \pi$, giving your answers in radians to 2 decimal places. (5)
- 6 a Given that $y = \ln \sec x$, $-\frac{\pi}{2} < x \le 0$, use the substitution $u = \sec x$, or otherwise, to show

that
$$\frac{\mathrm{d}y}{\mathrm{d}x} = \tan x$$
. (3)

The curve C has equation $y = \tan x + \ln \sec x$, $-\frac{\pi}{2} < x \le 0$.

At the point P on C, whose x-coordinate is p, the gradient is 3.

b Show that
$$\tan p = -2$$
. (6)

- **c** Find the exact value of sec p, showing your working clearly. (2)
- **d** Find the y-coordinate of P, in the form $a + k \ln b$, where a, k and b are rational numbers. (2)

7 The diagram shows a sketch of part of the curve with equation y = f(x). The curve has no further turning points.

On separate diagrams show a sketch of the curve with equation

$$\mathbf{a} \ y = 2\mathbf{f}(-x)$$

$$\mathbf{b} \ \mathbf{y} = |\mathbf{f}(2\mathbf{x})|$$

In each case show the coordinates of points in which the curve meets the coordinate axes.

$$g: x \rightarrow |x + 1| - k, x \in \mathbb{R}, k > 1$$

c Sketch the graph of g, showing, in terms of k, the y-coordinate of the point of intersection of the graph with the y-axis.

(3)

Find, in terms of k,

$$\mathbf{e} \ \mathbf{gf}(0) \tag{2}$$

f the solution of g(x) = x(3)
